

# Science at the Zoo

Zookeepers check animal poo regularly to make sure they are healthy and getting the right food.

# Science at the Zoo

Marine Biologists check the amount of salt in the water by looking at a sample with a refractometer.

# Science at the Zoo

Zookeepers prepare nutritious and natural diets to recreate what and how they would eat in the wild.

# Science at the Zoo

Science is used to design animal habitats that mimic the wild but keep animals safe.

# Science at the Zoo

Zookeepers provide enriching activities for animals to bring them joy.

# Science at the Zoo

Zookeepers keep animals and humans safe by removing venomous snakes back to the wild.

# Science at the Zoo

Zookeepers build trust with animals when they feed them. This means they can get up close to check their health.

# Science at the Zoo

Zookeepers check animal weights and physical condition regularly.

# Science at the Zoo

Zookeepers build trust with animals so they can meet people during an encounter. They educate people on animal needs.

# Science at the Zoo

Zookeepers take people in for encounters where they can feed animals. They teach about the animals behaviours and their status in the wild.
